

A dark, rectangular image showing the Q-Mason robot in operation. The robot is a small, white, box-like device with a camera lens and sensors on top, mounted on a dark surface.

The Construction Finishing Platform

Q-Mason (QM1) is a robotic platform that automates interior wall and ceiling finishing — grinding, gypsum plastering, putty and painting — to sub-millimeter precision. Built to International Standards and designed specifically for the Indian mass housing market.

<1mm

Finish tolerance, digitally verified on every pass

5x Plus

Faster execution than manual finishing crews

100%

Digital QA logs, generated automatically at every site

HOW IT WORKS

1 → 4

AUTOMATE

Grinding, gypsum plastering, putty and painting — all automated in one machine, with interchangeable tool ends covering the full finishing sequence.

<1mm

DATAFY

Every pass is measured and logged — finish held to under a millimeter, with a digital QA record captured automatically on every wall and ceiling.

RaaS

SCALE

Delivered as Robotics-as-a-Service with trained on-ground operators and full backend support, so sites scale adoption without in-house robotics expertise.

THE FINISHING SEQUENCE

GRINDING → GYPSUM → PUTTY → PAINTING
